

Update Report on Nepal Skill Centre – 15 March 2018

Dr Paleswan Joshi Lakhey

We were able to conduct the first skill course on basic laparoscopic surgery on 9th and 10th March at the Skill Lab established with the generous donation from IHPBA foundation and Ethicon. There were total of 11 participants who appreciated the program very much and look forward to further such programs as well.

We have planned to have such programs every 3months. We have categorised the skill course into two levels. Level I will have basic and advanced course while level II will include specialty skills like learning hepaticojejunostomy or pancreaticojejunostomy.
